DETAILED ACTION

Priority

Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Japan on 08/02/2001. It is noted, however, that applicant has not filed a certified copy of the P2001-032795 application as required by 35 U.S.C. 119(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

1. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Hardman (5,405,136).

With respect to claim 1, Hardman discloses a metal golf club on Figure 11 having an insert where the hardness of the center portion 80 is greater than the hardness of the periphery portion 84. (Col. 4, lines 26-30).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 2-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hardman (5,405,136). With respect claim 2, Hardman discloses the claimed invention except the steps of welding face member onto other club members; however, Official Notice is taken that it is old and conventional to weld face member onto other parts of the club head and it would have been obvious to do so here to facilitate assembly. With respect to claims 3 and 4, it appears that the difference in hardnesses between the center portion and the periphery portion of the striking face would require such obvious measurement steps in order to evaluate the hardness from point A to point B. With respect to the width of the periphery, such width range is necessary to establish the basis for testing the outer periphery hardness and it appears that Hardman's golf club has such established width range. Taking the "average" and "mean" of the measured values is data manipulation and such calculation is obvious in Hardman's invention. With respect to claims 5-7, Hardman discloses the claimed invention except the Vickers hardness; however, Hardman shows on Figure 11 that the central portion 80 has a Shore A of 80 (233 HV) and the outer ring 84 has a Shore A of 40 (1 HV). In addition, Applicant should note that the standard of measuring hardness of a face insert is in Rockwell hardness scale and the Rockwell scale has a direct relationship with Vickers hardness scale.
